| WYFRA | AUDIT COMMITTEE | 20 OCTOBER 2006 | ITEM |
|--------------|------------------------|------------------------|-------------|

REPORT OF: DIRECTOR OF CORPORATE RESOURCES

PURPOSE OF REPORT: TO PROPOSE THE INTRODUCTION OF AN ASSET MANAGEMENT PLAN

RECOMMENDATION: THAT THE ASSET MANAGEMENT PLAN IS APPROVED BY THE COMMITTEE

LOCAL GOVERNMENT (ACCESS TO INFORMATION) ACT DETAILS

EXEMPTION CATEGORY

ACCESS CONTACT OFFICER Mr N Rodriguez 01274 655871
Senior Corporate Resources Manager
noel.rodriquez@westyorksfire.gov.uk

BACKGROUND PAPERS NA

1. Background

- 1.1. The Comprehensive Performance Assessment (CPA) in April 2005 highlighted a number of areas where the Authority needed to improve. These areas have been incorporate into the CPA Improvement plan.
- 1.2. A specific area of weakness in the assessment highlighted a need to have an Asset Management Plan.
- 1.3. This document has been produced and is attached to this report. It highlights the main capital assets owned by the Authority and the way in which these assets are purchased, tracked and disposed of. The main assets being property, transport (fleet items), information technology equipment and operational equipment.

2. Financial Implications

- 2.1. The Balance Sheet included in the 2005/2006 statement of accounts identifies that the Authority has assets with a value of over £94m. Clearly the impact of purchasing, maintaining and disposing of such assets has a huge affect on the revenue budget of the Authority. The purpose of this policy is to ensure that the Authority manages the procurement, operation and disposal of these assets correctly.

3. Equalities & Fairness Implications

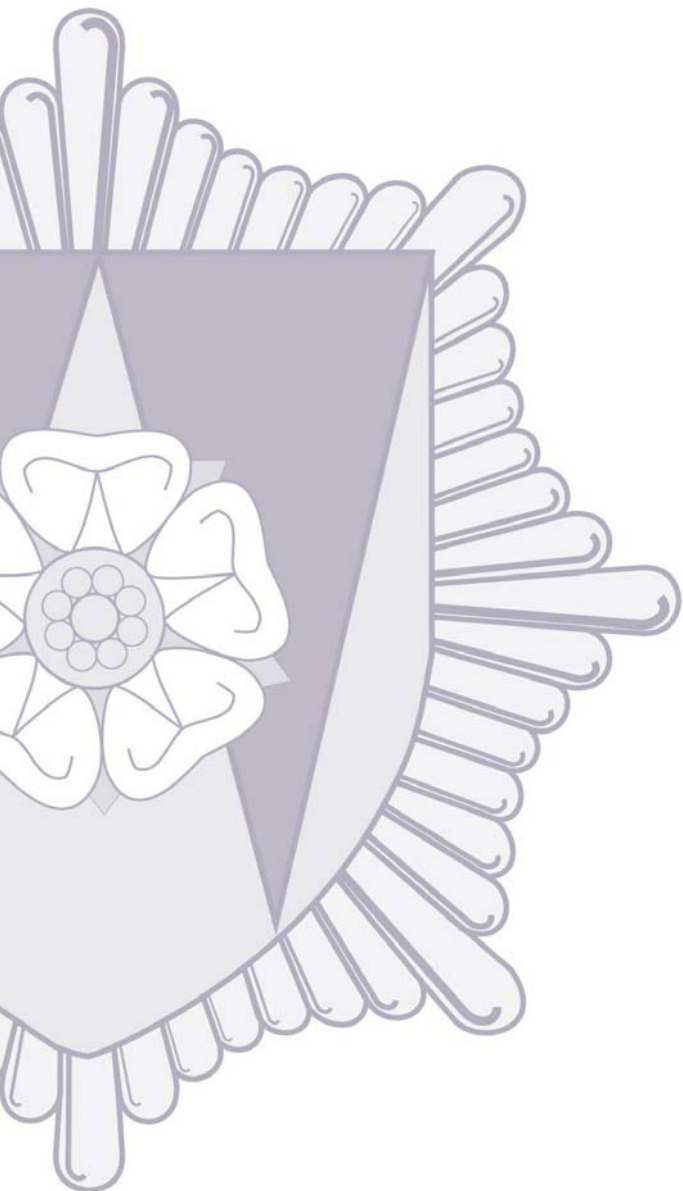

- 3.1. Equality and diversity implications will be addressed through the Equality Impact Assessment processes in place.

4. Recommendations

- 4.1 That the Audit Committee approves the introduction of the Asset Management Plan as detailed in this report.

West Yorkshire Fire & Rescue Service

ASSET MANAGEMENT PLAN

PREVENTING PROTECTING RESPONDING

1. WHAT IS ASSET MANAGEMENT AND WHY IS IT IMPORTANT?

In achieving its 'Vision' of Making West Yorkshire Safer, West Yorkshire Fire and Rescue Authority uses almost £100m of capital assets which can be split into four categories: -

- Property (land and buildings)
- Vehicles (the Authority fleet)
- Operational Equipment (to allow for emergency response)
- ICT hardware

If the Authority is to make best use of these assets it is vital that they are appropriate, up to date, well managed and maintained. The Authority controls this process by the use of an integrated asset management plan.

A more detailed definition of asset management is: -

“A systematic process of effectively acquiring, maintaining, upgrading and operating assets, combining community safety principles with a sound business practice and economic rationale. This process is not isolated from the overall planning process but is a fundamental part of the corporate planning process linking directly to the Capital Plan and the Integrated Risk Management Plan.”

In order to achieve this, assets need to be managed strategically in order to contribute to the long-term aims and objectives of the Authority. Other factors which will also need to be catered for are: -

- Tactically to support the particular needs of individual asset users.
- Integration with other management processes (Financial Management, Human Resource Management, Risk Management, etc.)
- In an efficient and effective manner in order to deliver 'Value for Money' and thus best value.
- In order to meet Audit Commission Use of Resources Assessment requirements and meet the Authority's Statutory Obligations under the Fire and Rescue Services Act 2004.

It is important that Asset Management is undertaken on a 'whole life' basis in line with the Authority Procurement Strategy i.e.

- A planned corporate approach to procurement supported by a clear business case endorsed by the Management Board and Elected Members.
- Fostering and encouraging partnership collaboration within the Service and, where appropriate, involving other agencies.
- Operation by the asset user.
- Regular review to ensure Fit for Purpose.
- Disposal when the asset is no longer needed or has reached the end of its economical life.

PREVENTING PROTECTING RESPONDING

2 ASSET MANAGEMENT PLANNING

2.1 The Asset Management Plan will inform and be informed by the Authority's other Corporate Planning Processes. These include:

- Corporate Plan which incorporates the 'Vision', Core Values, Strategic Objectives, Performance Information and Target's
- Integrated Risk Management Plan
- Capital Programme 2006

3 CURRENT WEST YORKSHIRE FIRE AND RESCUE AUTHORITY ASSETS

3.1 West Yorkshire Fire and Rescue Authority currently hold the following assets:

Property:

Wholetime Fire Stations
Retained Fire Stations
Fire Service Headquarters (FSHQ)
Training Centre
Workshops/Stores
Non operational land and buildings
Land/Buildings awaiting disposal

Transport:

Rescue Pumps
Aerial Appliances
Operational Support Unit
Prime Mover
Cars/vans trailer

Information and Communications Technology (ICT):

Servers
Desktop PC's and Terminals
Computer Monitors
Laptop Computers
Blackberry's
Printers
Radio equipment and systems
Telephone systems
Mobile Phones
Computer Software
Network Equipment

4 PROPERTY ASSET MANAGEMENT

A Schedule of Land and Property Holdings which contains the address and type of each property owned by West Yorkshire Fire and Rescue Authority is maintained by the Property Management Unit and amended when land and property is purchased or sold. *Appendix 'A'* shows a list of all the Authority property assets.

The legal title documentation for each property holding is retained and maintained by the Legal and Administrative Officer.

4 **PROPERTY ASSET MANAGEMENT** (continued)

For asset valuation purposes an Asset Valuation Report is commissioned every three years, the latest being carried out by the District Valuation Office dated 1 April 2005 which indicated an overall property asset value of £84 167 400 (eighty four million, one hundred and sixty seven thousand and four hundred pounds.)

A further schedule managed by the Property Management Unit provides a brief description and list of major works carried out on each property and an indication of potential future works.

Records of day-to-day remedial works are retained in a single file for each property which includes repair requests, orders and expenditure information. In addition, revenue expenditure information is retained on the electronic annual revenue expenditure spreadsheet which is updated on a daily basis.

Further site and property record information is available upon CAD drawings for each property, which have been collated, in recent years.

To assist with the strategic planning and prioritisation of the major refurbishment programme of works, a number of survey reports have been commissioned for reference when determining future requirements. These consist of Building Condition Reports, Type 2 Asbestos Survey Reports and Disability and Discrimination Act (DDA) provision assessments. In addition, future electrical, heating and other facilities maintenance contracts will be required to generate longer term refurbishment requirement planning information.

The creation and compilation of all such information is an ongoing process and continues to improve the strategic decision making process for future refurbishment prioritisation, budgeting and planning.

Disposal of Property Asset

Disposal of Property Assets are inline with the Authority's Financial Regulations, Standing Orders and in accordance with the Strategy for the Sale of Surplus Land and Property approved by the Authority's Executive Committee in June 2006.

5 **TRANSPORT ASSET MANAGEMENT**

Capital purchases of appliances and some ancillary vehicles are procured through contracts as per standing orders and financial regulations. These assets are entered and recorded on the Tranman computer system for inventory and audit purposes. The Tranman system stores all the recorded information on an archive file, which forms a whole life costing. The Fire Authority owns these assets. A full list of all these assets are shown in *Appendix 'B'*.

Fleet cars and ancillary vehicles, which are leased, are not owned by the Fire Authority. These leases are usually over a 3 or 5 year contract. These details are recorded on a separate computer system for inventory audit purposes. All associated costs on the lease vehicle are logged by the Leasing Company. *A full list of all these assets are shown in Appendix 'C'*.

5 **TRANSPORT ASSET MANAGEMENT** (continued)

All vehicles are replaced in accordance with the Authority vehicle replacement age policy, which is as follows:

- Aerials and special appliances 12-15 years
- Appliances 10 years
- Cars and Light vans 3-5 years
- Medium Van and 4X4 vehicles 5-7 years

The running costs of vehicles are reviewed annually which allows for rogue vehicles to be identified and thus allows for early disposal of vehicles operating outside the average running costs for that group of vehicles.

The Transport Department is also responsible for the purchase, repair and replacement of all the Authority's operational ladders, which once again are purchased in accordance with the Authority's Financial Regulations and Standing Orders shown in *Appendix 'D'*. The ladders are treated in the same manner as Authority vehicles with all costs associated with the maintenance of each individual ladder being recorded in the Fleet Management Computer system (Tranman).

All disposal of vehicle assets are inline with the Authority's Financial Regulations and Standing Orders which in the main is via sale at public auction.

6 **OPERATIONAL EQUIPMENT**

The procurement of operational equipment is placed within the remit of the Operations Equipment Team (OET) located at FRSHQ. The clear identification of a real or perceived need for the equipment forms the basis for procurement. Real need is that where the lack of a suitable piece of equipment has been identified by feedback from operational incidents and exercises. Typically, a greater emphasis will be placed on obtaining equipment for which the need has been highlighted most frequently, and where the proposed equipment would have enhanced the health and safety of personnel and/or assisted in bringing the incident to a successful conclusion more quickly. Occasionally, the purchase of new equipment will be required in order to fulfil the Authority's obligations under new legislation or national guidance. In such circumstances the procurement will be prioritised accordingly.

Finally, a perceived need for new equipment is that which may be identified by, for example, a simple suggestion put forward by an operational firefighter, or new ideas, technology and products that may be highlighted in specialist magazines. In the case of a perceived need, it is fundamental to ensure that the need really does, or will, exist and that operational capability will be improved by its purchase.

Within WYFRS the Technical Implementation Group (TIG) has been formed and meets regularly to discuss and agree on equipment matters. The TIG is composed of 'equipment stakeholders' from within the Authority and includes representatives from Operations, Training, Supplies, Transport and Representative Bodies.

Where agreement is reached that there is a need to purchase, a 'project file' is raised in OET and kept updated as necessary. The information is also stored electronically on the local area network ('G' drive).

6 OPERATIONAL EQUIPMENT (continued)

A period of research will initially take place to identify any equipment that will meet the required specification. The manufacturers/suppliers will then normally be invited to provide samples of the equipment for evaluation. The samples may be purchased outright, or provided on a 'sale or return' basis.

On receipt, both the actual equipment and the use of it is thoroughly risk assessed. It is also important at this early stage to perform an Equalities Impact Assessment before proceeding to an actual evaluation.

A 'New Equipment' consultation form is then issued to the Representative Bodies to ensure that they have all the necessary information to aid an open exchange of ideas/concerns etc throughout the evaluation period.

The equipment is then issued for evaluation to selected stations/departments. The locations selected will be those deemed most suitable to trial the equipment in question. Often this is based on where the equipment will probably be used the most or, in certain circumstances, it may be the location where the idea to evaluate it originated. It is important to note that all prospective users of the equipment must be trained prior to its issue, and that the evaluation paperwork and draft Technical Bulletin are issued with the equipment itself.

The evaluation will take place over an agreed period of time, during which both the personnel using it and members of OET will carefully monitor its use and condition. At the end of the period the equipment may be moved to another location for further evaluation, or returned to OET.

On completion of a successful evaluation, OET will liaise with the Supplies Section in order to draw up a specification for the required equipment and obtain quotes or tenders etc. On receipt of such, the Station Manager (OET) will prepare a capital bid for purchase of the equipment and submit it to Management. If approved, the purchase will be made in line with the current Financial Standing Orders.

Before, or on arrival of the new equipment, further consultation will take place with Workshops Department to ensure that stowage facilities on appliances are provided. Liaison with the Training Centre will also take place to programme the delivery of any training that may be required before the equipment is issued.

When the equipment is delivered to Supplies, each item will be marked with a unique identification number and entered onto the electronic Equipment Marking Scheme (EMS – see below).

Before the equipment is issued to stations it will be necessary to update: -

- The project file and the information on 'G' drive
- The risk assessment
- The consultation form

6 **OPERATIONAL EQUIPMENT** (continued)

Again, prior to issue, the following documents that are relevant to the new equipment must be prepared and promulgated: -

- Brigade Technical Bulletin (BTB)
- Standard Test Procedure
- Operations Policy Information Document (OPID) where required
- New Equipment Audit Form
- Circulation Memo

The risk assessment and BTB are also posted onto the WYFRS intranet site. All other documentation and research material is archived within OET.

All equipment is monitored and reviewed periodically, usually on an annual basis.

Equipment Marking Scheme

To ensure that all operational equipment is tracked, moved, tested and inspected correctly, WYFRS operates an electronic, Equipment Marking Scheme (EMS) purchased from Red Kite.

Every item of equipment is provided and marked with a unique identification number and entered onto the EMS. Electronic access to the scheme is available at all locations throughout the Brigade and each individual is issued with a unique password to allow entry into the system. Authority to test or move a piece of equipment is given by means of a 'competence level' dependent on the type of equipment in question. For example, very basic items of equipment have a low competence level and the majority of personnel may enter the test results. Conversely, only a qualified engineer may test items such as cables and lifting gear, and the electronic competence level is set to reflect this.

On a daily basis the system automatically informs users of the items of equipment required for testing. Where appropriate, the whole scheme may be interrogated/audited by both the OET and Supplies Department.

BTB 43 provides a comprehensive guide to the testing of equipment within WYFRS.

7 **INFORMATION & COMMUNICATION TECHNOLOGY (ICT)**

Procurement

All Information Technology and Communication equipment is procured according to the Budget Procedures and Financial Regulations of the West Yorkshire Fire and Rescue Service.

More information on these can be found at:

<http://intranet.westyorkshire.gov.uk/finance/delegatedBudgets.pdf>

Equipment is delivered and checked in by the Stores Department.

7 INFORMATION & COMMUNICATION TECHNOLOGY (ICT) (continued)

Depending on the asset value a decision is made with regards to the requirement to asset mark and track. The limit is currently set at £20

Items to be marked are Asset Tagged by the IT Department at the time of installation and information is entered into the Asset Register of the IT Helpdesk system.

Asset Management

Assets are tracked during their lifecycle by the Helpdesk System. This is soon to be supplemented by the Novell ZEN Asset Management System, which automatically gathers information about hardware and software and will give much more extensive and accurate information about all assets.

Note that small items such as mice and keyboards are BELOW THE THRESHOLD VALUE OF £20 and therefore not tracked in the same way.

The IT Department are considering working towards the ITIL Configuration Management Database method, which will bring information on all assets together.

Disposal

Equipment is disposed of according to the stipulations of the European Waste Electrical and Electronic Equipment Directive.

A local not-for-profit Community Enterprise Company is used to collect end-of-life equipment at no cost to WYF&RS. This equipment is stripped down for materials recovery by specialist processors, whilst equipment with further potential is checked, upgraded and offered to charities and community projects.

The company address is:

Extended Life Computers (ELC)
Units 14 & 15
Enterprise Centre
Hanson Lane
Halifax
West Yorkshire HX1 5PG

Tel: 01422 300455

More information about their methods and certification can be found at:

www.extended-life-computers.co.uk

8 CENTRAL CONTROL OF CAPITAL ASSETS

A central register containing all the Authority's assets is maintained by the Authority's Finance Department, with a copy also held by Kirklees Strategic Finance Section for audit purposes.

4 SCHEDULE OF NON OPERATIONAL PROPERTY

- 4.1 12 Acres of grassland and woodland in separate areas at the FSHQ Birkenshaw site.
- 4.2 Former Driving School Building now vacant at site of Bradford Fire Station (PMU Ref 40)
- 4.3 Land at Leeds Road, Maud Street, Bradford.
Site to be developed for construction of new Bradford Community Fire Station and will also accommodate Bradford District Fire Safety. The new building will allow the re-location of fire services from the existing Nelson Street, Bradford site.
- 4.4 Pudsey former Fire Station, Dawsons Corner, Stanningley, LS28 5TA
Closed following opening of new Stanningley Fire Station on 10 February 2003
Sale to private developer for housing being progressed.
- 4.5 Bramley former Fire Station, Stanningley Road, Leeds, LS12 3QG
Closed following opening of new Stanningley Fire Station on 10 February 2003
This building had been occupied under a short term commercial lease by Yorkshire Television to base a Television Drama series.
- A feasibility study is now being carried out upon the potential future use of the property to accommodate the Bramley Fireplace Fire and Safety Community and Education Centre.
- 4.6 1.1 Acres of grass land adjacent to former Bramley Fire Station with non-development planning classification.
- 4.7 Land at rear of Marsden Fire Station, use to be determined with proposed purchase and re-location of fire station to adjacent property.
- 4.8 House 5 Crummock Place at Knottingley to be sold following vacation of existing Firefighter tenant.
- 4.9 Sale of former Hebden Bridge Fire Station being planned following closure of station on 6 March 2006.
